(2019-2020)

CERTIFICATE

This is to certify that the below mentioned third year Diploma students have carried out the necessary project work on "Job Portal System" in the department of Computer engineering, Cusrow Wadia Institute of Technology, Pune-1. They have completed this project work under my guidance in satisfactory manner in May 2020 of third year Diploma.

1. Shubham Chavan
2. Rajdatta Jadhav
3. Yogesh Kaudre

Computer Engineering students have successfully completed project on “Job Portal System” towards the fulfillment of their Diploma in Computer Engineering in academic year 2019-2020.

The performance of each of these students during the course was very good.

ACKNOWLEDGEMENT

We have taken efforts in this project. However, it would have not been possible without the kind support and help of many individuals and organization. I would like to extend my sincere thanks to all of them.

I am highly indebted to 'Prof. A. A. Jambhale (H.O.D Computer Dept.)' and our project guide Prof. V.B. Kamble for their guidance and constant supervision as well as providing necessary information regarding project and also for their support in completing project.

I would like to express my gratitude towards my parents and members of computer engineering department for their kind co-operation and encouragement which help me in completion of this project.

I would like to express my special gratitude and thanks to industry person for giving me such attention and time.

My thanks and appreciation also to my colleagues in developing the project and people who have willing me help out with their abilities.

Shubham Chavan- 174009

Rajdatta Jadhav- 174018

Yogesh Kaudare- 174024

ABSTRACT

We are developing a system which is helpful for candidate as well as company. Advantage of this system is job search is efficient. We have proposed new feature which can take review/feedback form from candidate and company.

In this Job Portal system admin will add company by verifying their documents then it will send the successfully register to system message to company through the e-mail.

After that company will get the username and password through the mail. Then company will login to the system and search for the candidate. Company also update their profile and also add the job opening. Company also contact to candidate when the admin will send the shortlisted mail of candidates.

Candidate first will register to the system. It will get the successfully register message and username and password through the mail. Then candidate will login to the system by entering the username and password. Candidate can search for the job and apply for that job. Applying process will be done through the admin. Admin will shortlist the candidate which are apply for the same company and send the mail to that company. Candidate can search for company and also apply for that job. Candidate can also update their profile and delete their account. Company and candidate can also give the feedback to the system. Admin have rights to delete the company. This overall system will be handled or managed by the admin so there is more security.

For this feature our system is most secure than other system.

Keywords: Job Portal system, Admin

1. INTRODUCTION

The Internet-based recruiting platform become primary recruitment channel in most companies. While such a platform decrease the recruitment time and advertisement cost, they suffer from inappropriateness of traditional information retrieval techniques like Boolean search methods. Consequently, a vast amount of candidate missed this opportunity of recruiting.

Recently, Job portal has attracted a lot of researches and attention and played an important role on the online recruiting websites. Different from of traditional portal system which recommended items to users and job portal system recommended one type of user websites. In this, job portal system is designed to retrieve a list of job position to a job applicant based on his/her preferences or to generate a list of job candidate to recruiter based on job requirements.

The Job Portal System aims to help candidates as well as company to finding that match their personnel interest; and also apply for that choice. This system is most secure than the other system, because we add admin which is add company by verifying the documents. Then company will login to system and process to system. Candidate will register to system and then login to system. It makes more secure and helpful for both the persons. Now a days so many company are fraud and misuse candidate information that's why we add admin.

Our system which is helpful to candidate and company. We make reliable and more easy to use system. In this system admin will add the company by verifying their documents and then register. Candidate have rights to register in the system. After that both candidate and company will search for each other for appropriate post and apply to each other but confirmation will send by admin. Admin will send the shortlist to the candidate as well as the company. It makes more secure and there is not create any misunderstanding. For this system makes a good for use and more secure than other systems.

2. PRESENTLY AVAILABLE SYSTEM

Now recently available system overview is, there is only candidate and company interaction. There is no admin present in the system. All the process is done by candidate and company. Candidate registered to the system and search as well as apply for the job. Same as the company registered and search for candidate. There is no security of candidate as well as company profile. There is no security of the company as well as the candidate documents. Company can be fraud it may be misuse candidate details. For this reason candidate will stuck in many problems.

That's why so many candidate will not use the job related web sites they refer to go and search face to face jobs. For this reason so many candidates are jobless. They have qualification but not have appropriate job. In this system search is not efficient. Also there is no option of feedback which make system more reliable and popular. On the feedback basis candidate will think about the system and then login to system. On feedback basis candidate will judge the system and also check how it is trustful. For this reason we develop the more trustful and easy website for candidate.

Module:-

1. Candidate will register to the system same as for the company also register to the system without any verification of documents.
2. Candidate can apply to the appropriate job without verify that company is valid or not.
3. In this system there are many fraud companies are register to the system and misuse candidate details.
4. Company also contact to candidate directly.
5. In this system admin only control the all system and check system works properly or not.

3. NEED OF SUCH SYSTEM

In this system search is efficient for the candidate as well as company. This system specially developed for the candidate because now a days so many graduate candidate have no job they find their best job. In this system they get the so many different opportunities and the option for their education. They also choose the write company from their capability and choice. There are many companies are registered in the system to find the appropriate candidate for the job.

1. This system is useful for searching of jobs for candidate and also searching of candidate for company.
2. Candidate will also find the job by the location salary.
3. Company also finds the appropriate candidate by their experience and skill and also from their expectations.
4. It is easy to find the appropriate job and company for appropriate person and also company search appropriate candidate for the appropriate post.
5. Candidate can also delete their account form the system.
6. Company account will deleted by the admin because admin handle the all details of the company.
7. Admin will send the shortlist of the candidate to the company by the mail so there is no misunderstanding between the company and candidate.
8. Admin also send the company approved message to the candidate through mail.
9. Also company and candidate give feedback or comment or suggestion for the system.
10. This system is easy and portable for the company as well as candidate.

4. DETAILED PROBLEM STATEMENT

In the many web sites related of the job recommendation have issues related to the system. In many web sites, the company is directly contact and check the candidate details. So, there is no security of the candidate profile. This technique is good but all the companies are not certified it may be a fraud. So, for this reason we add the third person which is admin. Admin will verify the company details then it will approved the company profile. So, there is more security of the candidate as well as the company's profile. When the company will approach candidate it will confirm through the admin. But in other system it will directly contact with each other.

In the before system there is no security of the company as well as the candidate details. Company and candidate directly login to the system and add profile in the system, there is a no verification of the details and no verification of the person. But in this system admin will verify the company document, check whether it is valid or not then it will add the company and send the registered message to the company.

REQUIREMENT ANALYSIS:

1) PHP:

PHP (PHP, Hypertext Pre-processor) is a scripting language originated in 1995 by a software development contractor named Rasmus Lerdorf. It has developed as one of the best larger scripting languages around the globe .PHP is a server-side scripting language that was introduced for developing dynamic web applications. PHP code is embedded into HTML source file with PHP tags and interpreted by web server. Its syntax is a mixture of C, Java and Perl languages. PHP became very famous among developers because of its easy connectivity to MySQL databases that leads to creating dynamic web sites. PHP can be used from command line interface or in standalone graphical applications. It can be deployed on any server and any operating system easily.

2) MySQL:

A database is a collection of useful information that can be easily accessed, modified, managed and updated. It is use to provide efficient retrieval. The data, which is stored in a database, can be in any format .MySQL is an open source Relational Database Management System (RDBMS) that uses Structured Query Language (SQL).

The main features of using MySQL are that it is very user friendly, easy to use, quickly processing Qqq and flexible. Because it is a relational database, it stores data in different tables making it possible to use same data flexibly in different ways. MySQL server controls the access to project data and makes sure that multiple users can work parallel with the same data with fast and easy access. It also restricts to the authorized users who can have access to the data. Many large and medium scale companies are using MySQL to save money and time keeping their high volume, critical business systems. MySQL is easy to use and of a high reliability. It is very light weight and can run on over 20 different operating systems. MySQL database contains tables, where each table contains rows, with each row containing columns where data is stored.

3) CSS:

CSS (Cascading Style Sheet) is a style sheet language use for styling HTML elements on a web page. It defines the presentation of HTML elements, how they appear on web page, including designs, layouts, fonts and tailor pages on different environment.

4) XAMPP Server:

The most obvious characteristic of XAMPP is the ease at which a WAMP webserver stack can be deployed and instantiated. Later some common packaged applications that could be easily installed were provided by Bitnami. Officially, XAMPP's designers intended it for use only as a development tool, to allow website designers and programmers to test their work on their own computers without any access to the Internet. To make this as easy as possible, many important security features are disabled by default. XAMPP has the ability to serve web pages on the World Wide Web. A special tool is provided to password protect the most important parts of the package. XAMPP also provides support for creating and manipulating databases in MariaDB and SQLite among others. Once XAMPP is installed, it is possible to treat a localhost like a remote host by connecting using an FTP client. Using a program like FileZilla has many advantages when installing a content management system (CMS) like Joomla or WordPress. It is also possible to connect to localhost via FTP with an HTML editor.

5. Software Requirement Specification

5.1 Software Requirements

1. Operating System: Windows 7
2. IDE: Vscode
3. Application Server: Apache ,XAMPP
4. Database: MySQL Database
5. Front End: PHP, CSS, JavaScript
6. Browser: Chrome or Firefox or Internet Explorer

5.2 Hardware Requirements

1. Processor: Intel core i7
2. Processor speed: 3.40 GHz
3. RAM: 8 GB

APPLICATION PREVIEW

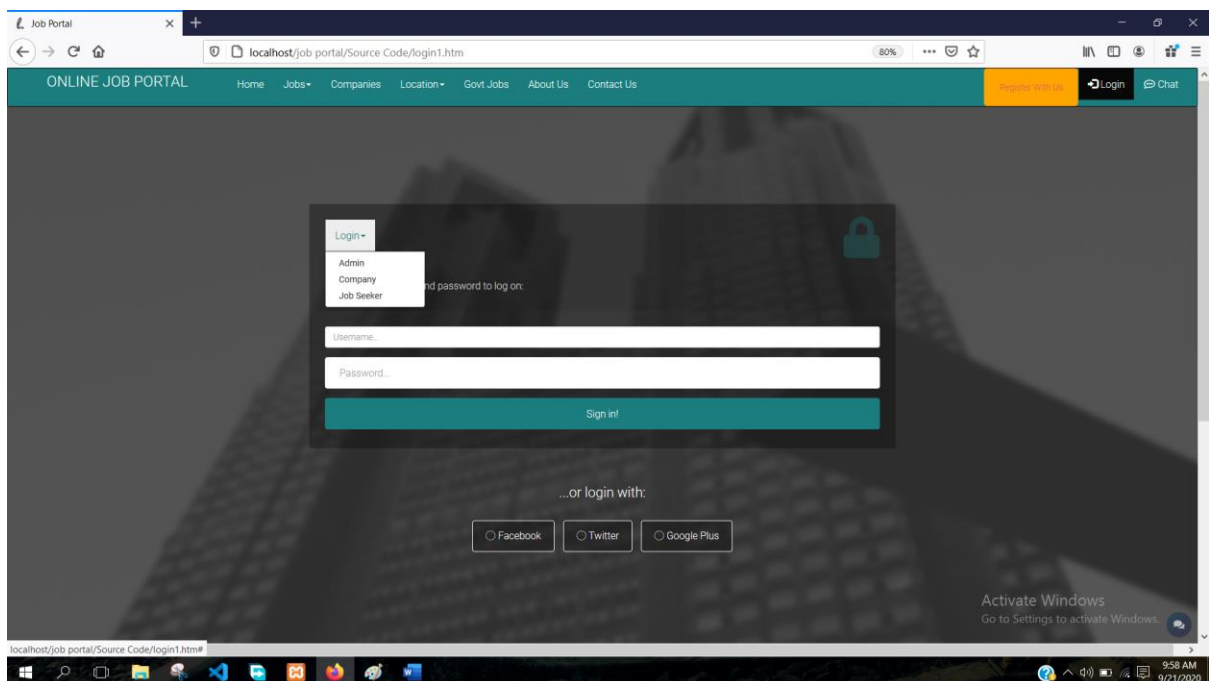

1. Admin:

This page is the main page or homepage of system.

Login

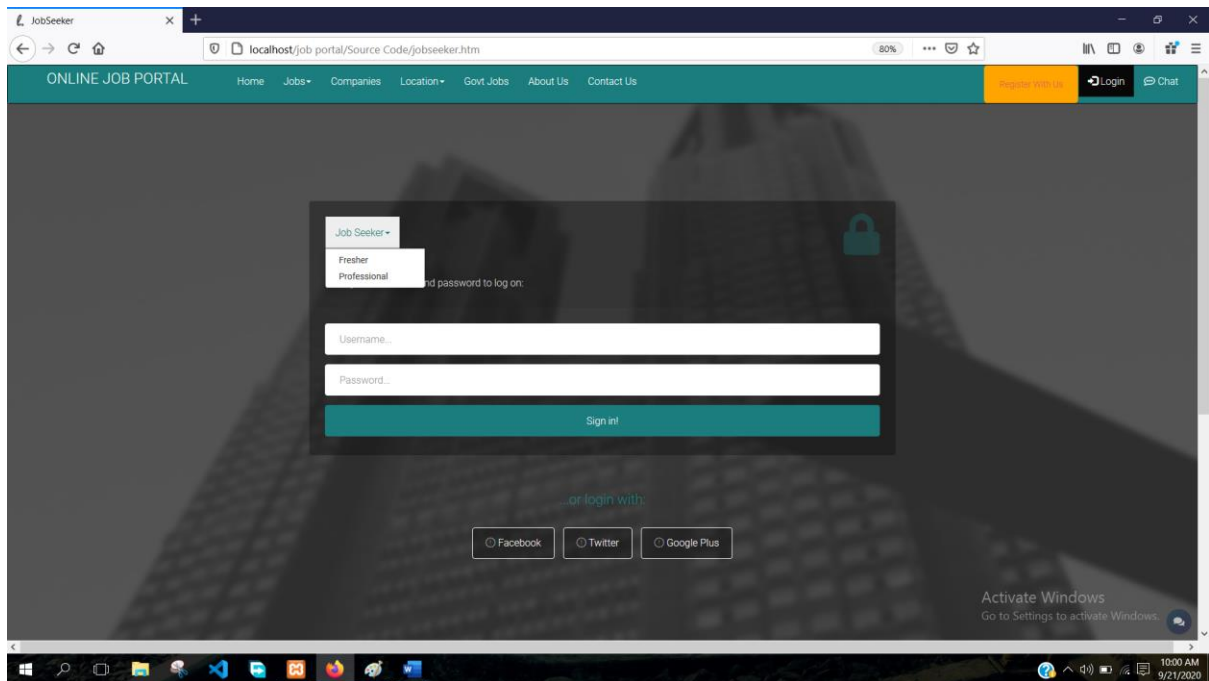

Admin Login

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/admin_login.htm`. The page features a teal header with the text "ONLINE JOB PORTAL" and navigation links: Home, Jobs, Companies, Location, Govt Jobs, About Us, and Contact Us. On the right side of the header, there are buttons for "Register With Us", "Login", and "Chat". The main content area has a dark background with a central login form. The form is titled "Login" and includes the instruction "Enter your username and password to log on:". It contains two input fields, "Username" and "Password", followed by a teal "Sign in!" button. Below the form, there is a link "...or login with:" followed by three buttons: "Facebook", "Twitter", and "Google Plus". In the bottom right corner, there is an "Activate Windows" watermark with the text "Go to Settings to activate Windows." The Windows taskbar at the bottom shows the time as 9:59 AM on 9/21/2020.

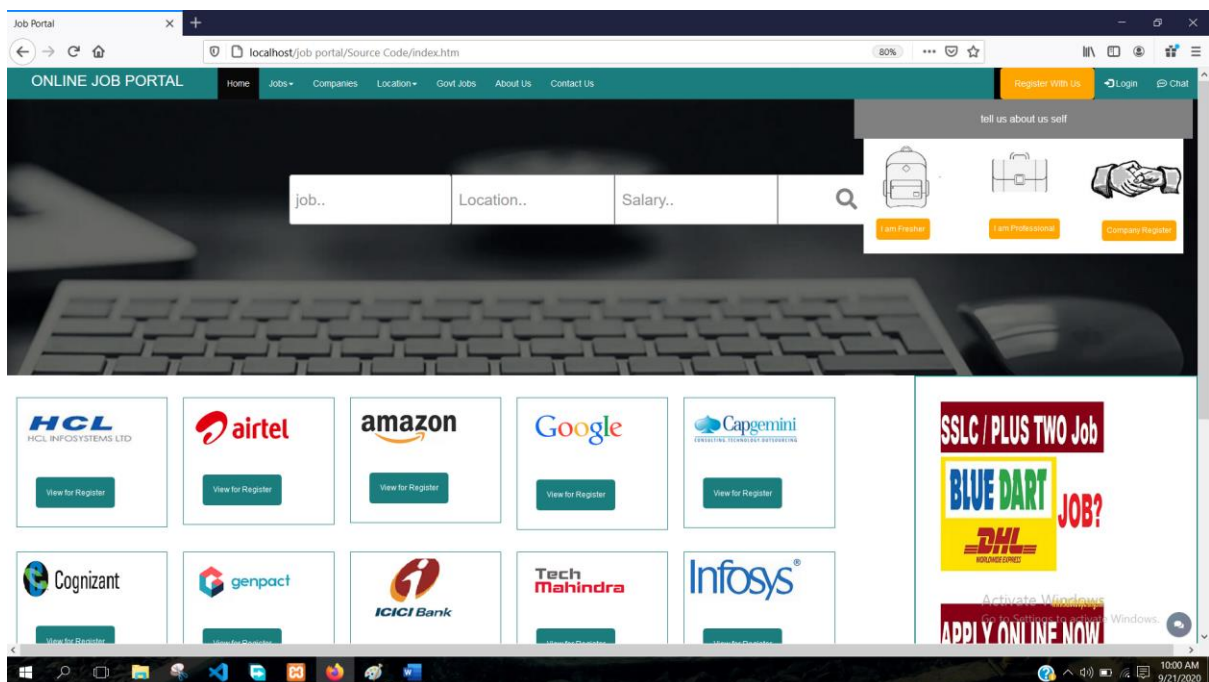

Company Login

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/com_login.htm`. The page features a teal header with the text "ONLINE JOB PORTAL" and navigation links: Home, Jobs, Companies, Location, Govt Jobs, About Us, and Contact Us. On the right side of the header, there are buttons for "Register With Us", "Login", and "Chat". The main content area has a dark background with a central login form. The form is titled "Login" and includes the instruction "Enter your username and password to log on:". It contains two input fields, "Username" and "Password", followed by two teal buttons: "Sign in!" and "Forgot Password". Below the form, there is a link "...or login with:" followed by three buttons: "Facebook", "Twitter", and "Google Plus". In the bottom right corner, there is an "Activate Windows" watermark with the text "Go to Settings to activate Windows." The Windows taskbar at the bottom shows the time as 9:59 AM on 9/21/2020.

Candidate Login

Register

Fresher Registration

The screenshot shows a web browser window with the address bar displaying 'localhost/job portal/Source Code/fresher.php'. The page title is 'Fresher Registration Form'. The form contains the following fields and elements:

- Name:** A text input field with the placeholder 'Enter your full name'.
- Email ID:** A text input field with the placeholder 'Enter your active email id'.
- Select Your Qus:** A dropdown menu with the placeholder 'What is your favourite color?'.
- Your Answer:** A text input field with the placeholder 'Enter your answer'.
- Create Password:** A text input field with the placeholder 'minimum 6 characters'.
- Mobile Number:** A text input field with the placeholder 'enter your 10 digit mobile number'.
- Current Location:** A dropdown menu with 'Dehi' selected.
- Upload Resume:** A file upload button labeled 'Browse...' and the text 'No file selected'.
- Agreement:** A checked checkbox with the text 'I agreed to the Terms & Privacy governing the use of online job portal' and 'I have reviewed the default Mailer and Communications settings'.
- Submit Button:** A large orange button at the bottom of the form.

An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.

Professional Registration

The screenshot shows a web browser window with the address bar displaying 'localhost/job portal/Source Code/professional.php'. The page title is 'Professional Registration Form'. The form contains the following fields and elements:

- Email ID:** A text input field with the placeholder 'Enter your active email id'.
- Select Your Qus:** A dropdown menu with the placeholder 'What is your favourite color?'.
- Your Answer:** A text input field with the placeholder 'Enter your answer'.
- Create Password:** A text input field with the placeholder 'minimum 6 characters'.
- Mobile Number:** A text input field with the placeholder 'enter your 10 digit mobile number'.
- Current Location:** A dropdown menu with 'Dehi' selected.
- Total Work Experience:** Two dropdown menus for 'Years' and 'Months', both with '0' selected.
- Upload Resume:** A file upload button labeled 'Browse...' and the text 'No file selected'.
- Agreement:** A checked checkbox with the text 'I agreed to the Terms & Privacy governing the use of online job portal' and 'I have reviewed the default Mailer and Communications settings'.
- Submit Button:** A large orange button at the bottom of the form.

An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.

Company Register

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/company.php`. The page title is 'ONLINE JOB PORTAL'. The navigation bar includes links for Home, Jobs, Companies, Location, Govt Jobs, About Us, and Contact Us. There are buttons for 'Register With Us', 'Login', and 'Chat'. The main content area displays a 'Company Sign-up Form' with the following fields:

- Type Company/Consultancy (Dropdown menu)
- Company/Consultancy Name (Text input)
- Email ID (Text input)
- Select Your Qus (Dropdown menu)
- Your Answer (Text input)
- Enter Password (Text input)
- Mobile Number (Text input)

An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.

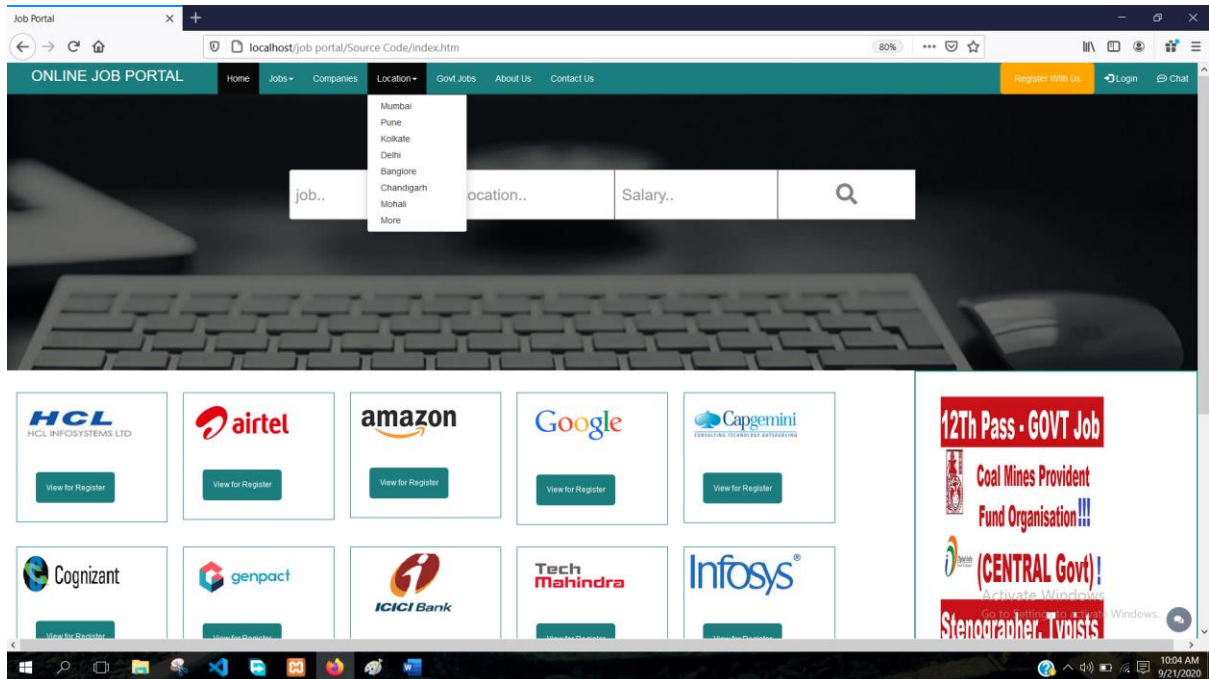

Companies

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/mycompany.htm`. The page title is 'Job Portal'. The navigation bar includes links for Home, Jobs, Companies, Location, Govt Jobs, About Us, and Contact Us. There are buttons for 'Register With Us', 'Login', and 'Chat'. The main content area displays a 'Browse Companies' section with a grid of company cards. Each card includes the company logo, name, location, industry, star rating, number of reviews, number of interviews, and a 'VIEW COMPANY' button.

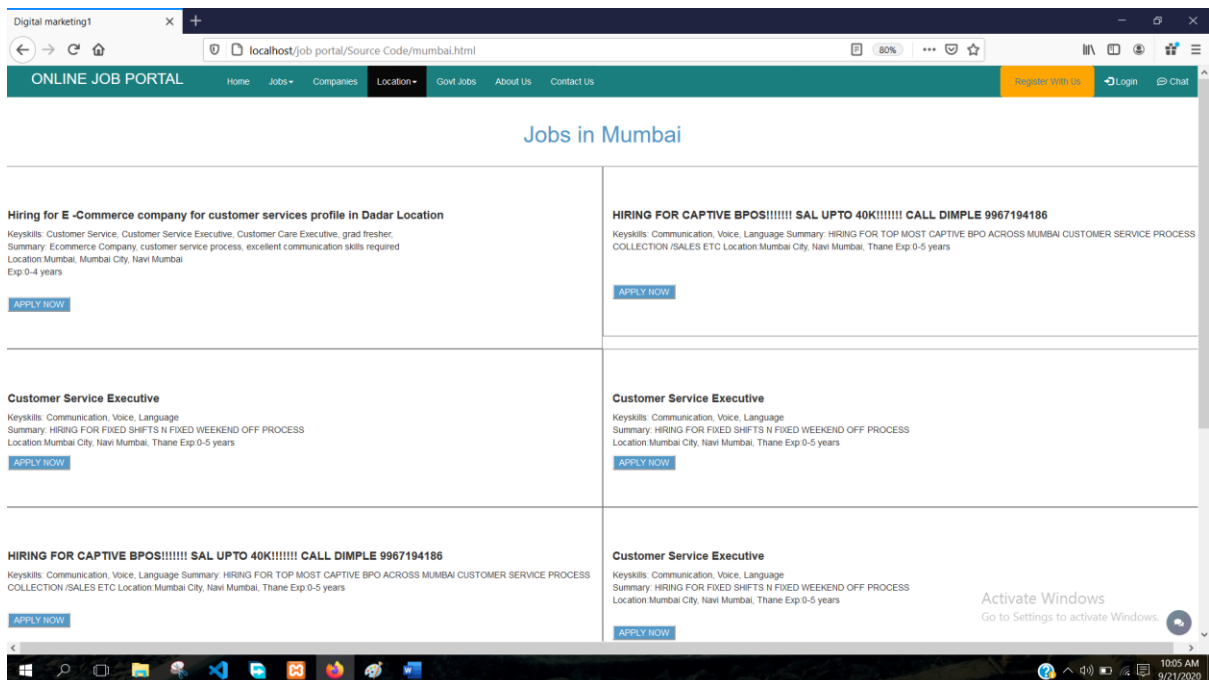

Company Name	Location	Industry	Star Rating	Reviews	Interviews
Tata Consultancy Services	Mumbai, India	IT / ITES	3.9	2720	350
ICICI Bank	Mumbai, India	Banking	4.1	2499	32
HDFC Bank	Mumbai, India	Banking	3.9	2456	23
Cognizant	Teaneck, NJ (US)	IT / ITES	3.7	2165	121
Larsen And Toubro	Mumbai	Conglomerate/Group	4.1	1941	105
Accenture	Dublin, Ireland	IT / ITES	4.0	1852	144
Tech Mahindra	Pune, India	IT / ITES	3.1	1587	27
Genpact	New York, USA	Consulting	3.9	1578	26

An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.

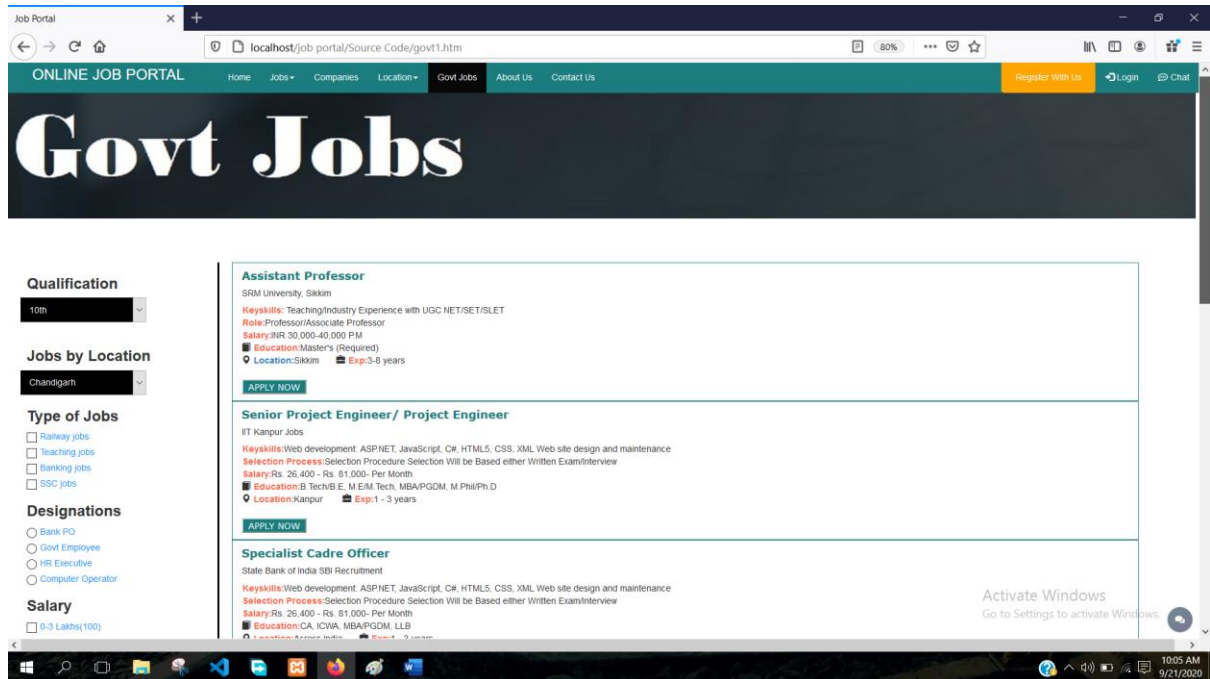

Location

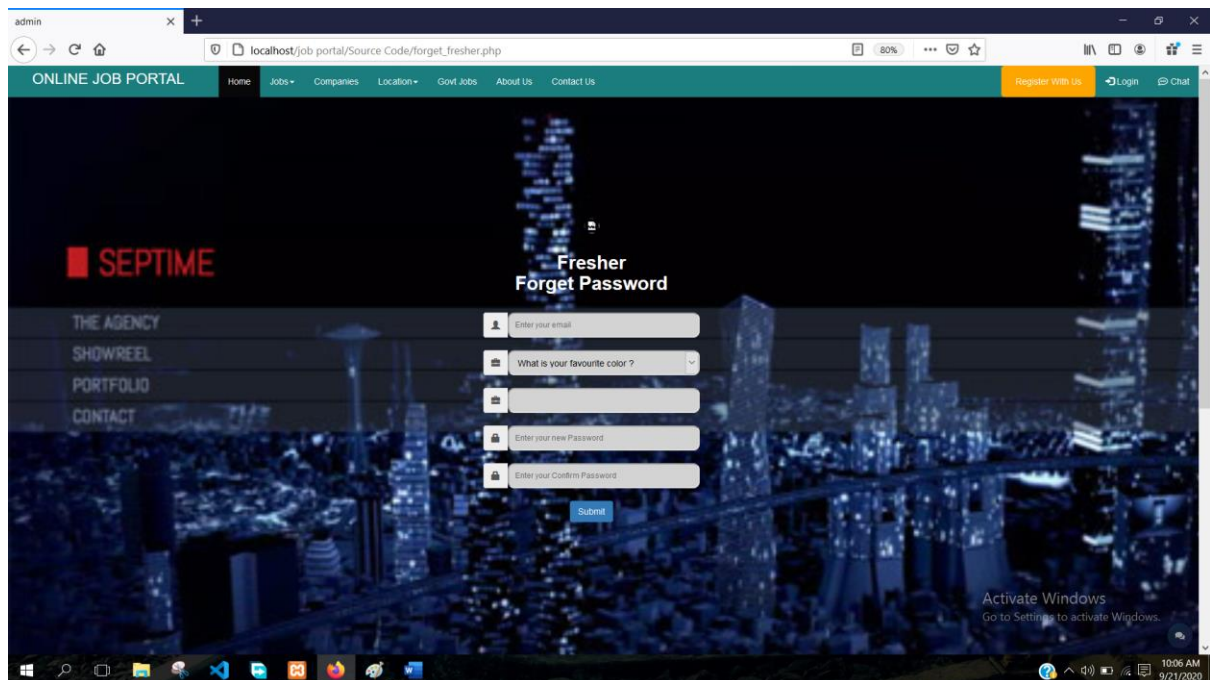

Locationwise jobs

Govt. Jobs

Forget password

Admin Login

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/admin_putjob.php`. The page is titled "ONLINE JOB PORTAL" and has a navigation bar with links: Home, Job Seekers, Companies, Company Jobs, and Post Job. The user is logged in as "rehat123" and has options to "Change Password" and "Logout". The main content area is titled "Edit New Job" and "Company Job Detail". It contains a form with the following fields:

- Company Name:
- Email_id:
- Job Title:
- Job Location:
- Job Salary:
- Candidate Qualification:
- Experience:

The background image shows a beach scene with palm trees and a book titled "Cathy Kell... It Started with Paris".

Change Password

The screenshot shows a web browser window with the URL `localhost/job portal/Source Code/admin_changepassword.php`. The page is titled "ONLINE JOB PORTAL" and has a navigation bar with links: Home, Job Seekers, Companies, Company Jobs, and Post Job. The user is logged in as "rehat123" and has options to "Change Password" and "Logout". The main content area is titled "Admin Change Password" and features a profile icon. The form includes the following fields:

- Enter your email:
- Enter your old password:
- Enter your new Password:
- Enter your Confirm Password:

A yellow "Submit" button is located below the form. The background image shows a city skyline at night. The text "SEPTIME" is visible on the left side of the page. The text "Activate Windows" is visible in the bottom right corner.

8. SALIENT FEATURES

1. Single point for all the recruitment needs.
2. Makes your recruitment process methodical, reduces cost and time.
3. Resume search and job search by location, experience, skills and qualification.
4. Improved quality of recruitment.
5. Tracking of job / applicant status.
6. Reliable Review.
7. Efficient searching.
8. Interview scheduler.
9. Candidate have right to delete his or her account.
10. Candidate details are more secure there is no change to hack their details.
11. All the main process done through administrator for the security purpose.
12. It is easy to find appropriate job and company for appropriate person. And also company search appropriate candidate for appropriate post.

9. FUTURE PROSPECTS

1. An area which is definitely going to grow and increased and increased competition is the relatively underserved mass recruitment segment to serve this segments however one cannot employ a high recruitment model as the commercial dynamics and the speed of response expected by employers do not such luxuries.
2. Emergence of scalable solution for this segment required pre-screening of profiles on parameters beyond demographics and experience, references(location, industry, shifts);skills and individual behavioural data of jobseekers will be employed to pre-screen candidate for job.
3. The current trend of using social media and digital marketing to source information of “interested jobseekers will grow even more rapidly”.
4. Increased competition of talents at all levels, soaring attrition rates and change skills requirement for employability are driving innovation in hiring.
5. Job seeker in this segment displays highly transient characteristics. This points to a need to track and curate these job seeker profile as they add skills and change their preferences over short period of time.
